

GitHub Integration Test - Proposal

Purpose

Validate and verify the GitHub push integration for the Discord dispatch system. This test confirms that proposals generated through Discord can be automatically committed and pushed to your GitHub repository.

Scope & Deliverables

- Integration validation - Confirm Discord -> Worker -> GitHub flow executes without errors
- Push verification - Validate that proposal content appears correctly in target repository
- Documentation update - Record test results and any configuration adjustments needed
- Handoff - Working integration ready for production proposal generation

What Changes When This Goes Live

You'll know the system works end-to-end. Every proposal generated through Discord will automatically version-control itself in GitHub, creating an audit trail and backup system that runs without you touching it.

Timeline

Week 1

- Execute test push (Day 1)
- Verify repository update (Day 1)
- Document results (Day 2)
- System ready for production use (Day 3)

Investment

Total: \$500

- 50% (\$250) - Upon approval
- 50% (\$250) - Upon successful test completion

This is a flat-fee engagement. The price covers the test execution, verification, and

documentation regardless of hours spent.

Ready to proceed? Reply to confirm and we'll kick off the test sequence.
