

# Test Failure Simulation

---

This worker is intentionally configured to fail for testing the Level 4 recursive optimization system.

## Error Context

Client: Client

Project Type: test\_failure

Brief: test

## Simulated Failure

This is not a real deliverable. The worker has been designed to return an error state to validate:

- Failure detection mechanisms
- Error logging and tracking
- Recursive optimization triggers
- System resilience under failure conditions

## Expected System Behavior

When this worker fails, the orchestration system should:

1. Log the failure with context
2. Increment failure counters
3. Trigger optimization protocols if threshold reached
4. Route to appropriate error handling

---

Status: INTENTIONAL\_FAILURE

Timestamp: 2025-12-31
